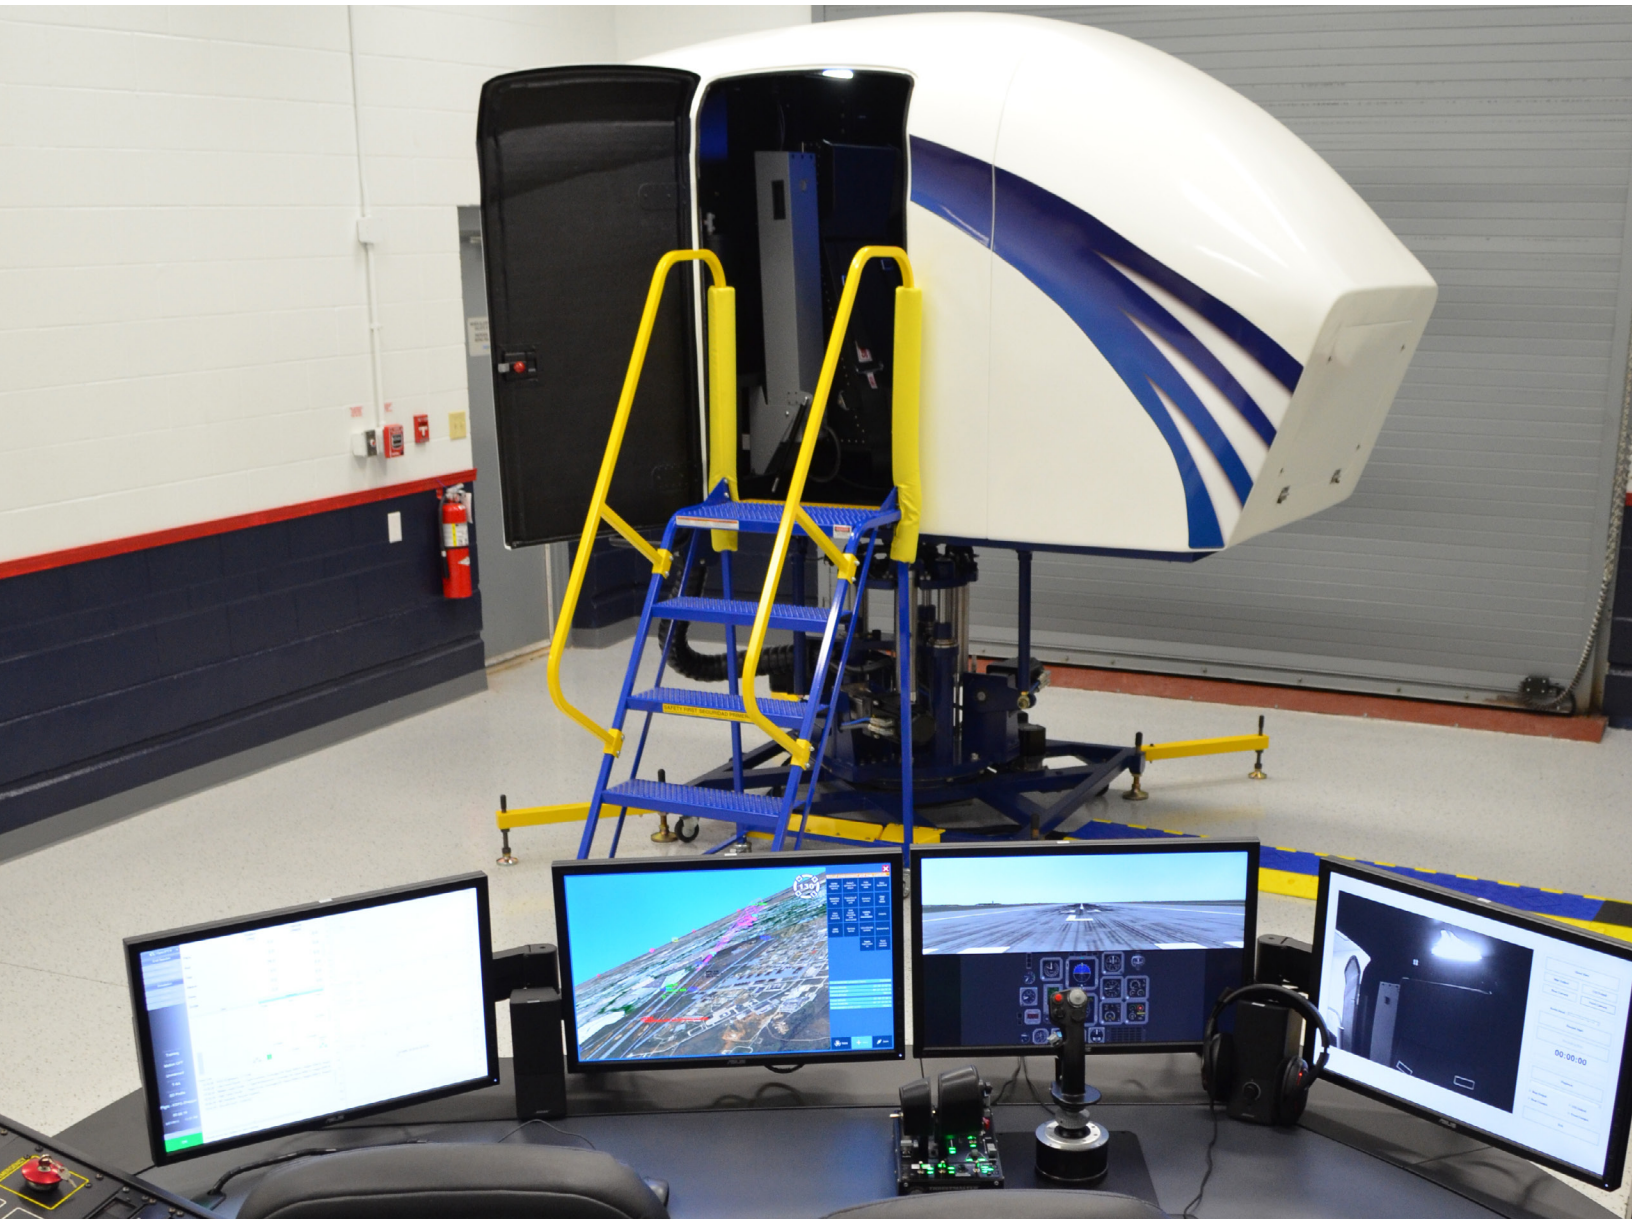
GYRO IPT-II

The GYRO IPT-II is a fully interactive, hands-on, real-world flight simulator designed for realist flight experience. Unlike many flight simulators, in which a pilot is just 'along for the ride,' a pilot in the Gyro IPT-II has full, closed loop control during the entire experience.

The GYRO IPT-II also features an interactive editor that allows the user to create, store, modify, and run illusion profiles. Illusion profiles are fully automated and can be run individually or multiple illusions can be combined into a single flight.



GYRO IPT-II

APPLICATIONS

- Ocean
- Racing
- Aviation
- Space
- And Beyond

SPECIFICATIONS

- 6 Degrees of Freedom (DoF) Motion System
  - Continuous 360° Pitch, Roll, Yaw, sway, surge, and heave
- Interactive flight profile editor
- 14 Fixed Wing & 8 Rotary Wing SD illusions
- Single seat or dual seat configuration
- Wide Field of View visual display and 3D visuals
- Stereo sound and communication system

VALUES

- Hands-on interactive experience
- Simulation with sustained motion cuing for optimal skill acquisition and retention
