GL-6000

The GL-6000 is a flexible, multifunctional device with advanced motion capabilities and offers the capability to authentically replicate physiological stressors to provide the most realistic motion experiences.

GL-6000

APPLICATIONS

- Racing
- Aviation
- Space
- And Beyond

SPECIFICATIONS

- 6 Axes of Motion (Rotary, Pitch, Roll, Yaw, Vertical, Horizontal)
- $\pm 360^\circ$ Continuous Rotation in 4 axes (Rotary, Pitch, Roll and Yaw)
- 15–7 foot horizontal sled
- ± 3 foot vertical carriage
- Maximum G: ± 3 G
- 53 foot arm structure
- Electro-mechanical drives

VALUES

- Realistic flight instruments & controls provide realistic training environment for beginning pilots
- Conversion to forward flight or hover
- Aircraft-specific cockpit configurations, visual database, and flight modes able to be customizable to suit training needs
